Abstract (en)

[origin: EP1325866A1] The present invention refers to a support base for fixed column and rotating platform winding apparatus. The support base comprises a pair of horizontal side frames (2), on which are positioned a support plate (6) of the fixed column (7), a support plate (12) of the rotating platform (13) and a closing plate (26) of the space between said support plates (6, 12). Said support and closing plates (6, 12, 26) are fastened to the side frames (2) by fastening means applied during the mounting phase, in particular by means of fastening bolts. The support plate (12) of the rotating platform (13) is in turn produced in the form of separate parts (22-24), that can be combined and fastened to each other and to the above-mentioned side frames (2) by similar fastening means applied during the mounting phase, in particular by means of fastening bolts. <IMAGE>
