Abstract (en)
[origin: WO0232263A1] Backrest for chair comprising a supporting structure (24), a lumbar support element (34), which moves in relation to the supporting structure (24), and an adjustment mechanism (40) used to control movement of the said lumbar support element (34). The aforesaid adjustment mechanism (40) comprises a first pair of levers (42a, 42b) connected to the supporting structure of the backrest (24), means (46) for synchronizing the oscillating movements of the said levers (42a, 42b) around the respective connecting axes (44), and a second pair of levers (48a, 48b), each of which is connected to a respective lever (42a, 42b) of the first pair and to the lumbar support element.
