Abstract (en)

[origin: WO0216965A2] A system for calculating a position of a radioactivity emitting source in a system-of-coordinates, the system comprising (a) a radioactive emission detector; (b) a position tracking system being connected to and/or communicating with the radioactive emission detector; and (c) a data processor being designed and configured for receiving data inputs from the position tracking system and from the radioactive emission detector and for calculating the position of the radioactivity emitting source in the system-of-coordinates.

[origin: WO0216965A2] System (20) includes a radioactivity emission detector (22). System (20) according to the present invention further includes a position tracking system (24). System (24) is connected to and/or communicating with radioactive emission detector (22) in a two- or three-dimensional space defined by a system of co-ordinates.
