Abstract (en)
[origin: WO0233183A1] The invention relates to a toilet bowl (10) comprising separate parts (12, 16) respectively provided for receiving urine and feces. The aim of the invention is to effect a reliable separation between urine and feces with the use of structurally simple measures. To this end, the invention provides that an opening (32), which starts from the urine-receiving part, leads into a space (36) that, on the one hand, verges into a urine discharge (48) and, on the other hand, is connected to the feces-receiving part.
