Abstract (en)  
[origin: WO0231290A1] The invention relates to a tile for laying in enclosed spaces, especially but not exclusively, in so-cold damp rooms, such as bathrooms, toilets and cellars, but also entrance halls, conservatories and verandas. The inventive tile is characterized in that it consists of at least one decorative plate (2) and one support plate (3) which is fixed to said decorative plate by foam or by an adhesive; and in that the support plate (3) recedes behind the contour of the decorative plate(s) (2) on at least one side. The invention also provides that alternatively, the support plate projects beyond the decorative plate by essentially the same distance on the opposite side(s) or that the support plate also recedes behind the contour of the decorative plate(s) on this (these) side(s), in which case a connecting strip essentially fills the free space. The inventive embodiments relate to the configuration of the edges. A preferred variant is characterized in that a preferably flat heating element (5), especially an electric heating mat, is located between the decorative plate (2) and the support plate (3).
