Abstract (en)
[origin: WO0231342A1] The invention relates to a control module for controlling fluid in injection systems. Said control module comprises a valve body (2), inside of which valve needles (6, 24) of control valves (5, 17) are accommodated. These control valves (5, 17) enable the influencing of pressure build-up and pressure relief of control spaces (30) or of nozzle spaces on injectors. The control valves (5, 17) inside the valve body (2) can be electromagnetically actuated, whereby magnet coils are accommodated in recesses (9, 20) of insert elements (19, 32) or in recesses (9) located inside the valve body itself.
