Abstract (en)
[origin: WO0221550A1] The invention concerns an interrupting device for a contact pole in a switching apparatus consisting of a mobile contact-support (10) comprising a cylindrical contact pressure spring (15), a slide (20) mobile along an axis X and a mobile bridge (30) supporting two mobile contacts (41). The mobile bridge (30) has a central opening (33) wherein are inserted two protuberances (22) belonging to the slide (20) and provided with an outer pin (34) for locking the slide (30) on the mobile bridge (30). One end (16) of the spring (15), pressing on the mobile bridge (30), is maintained in position by an edge (28) provided on the lateral ends (25) of the slide (20) and is centred by the protuberances (22) of the slide (20).
