Abstract (en)

[origin: EP1327717A2] Device for spreading material comprises a material container (1) with a material application opening and a material conveyor (4) in the form of a conveyor belt on which a material carpet (11) is fed from the material container through the material application opening to a material distributor. A material carpet comminuting device (5) is provided outside the material container and in front of the conveying end of the conveyor belt. An Independent claim is also included for a winter service vehicle comprising the above device. Preferred Features: The material carpet comminuting device is arranged on the conveying end of the conveyor belt and consists of a comminuting roller.
