Abstract (en)
It is about a signposting, whose objective is to improve the current signs in order to facilitate; both the circulation of the smooth traffic, and the traffic of pedestrians, essentially in areas common to both groups. It includes some modules of illumination (1,1') that are disposed transversely in the highway (2) at the same time that they include some visualization elements which project with regard to the surface of the highway in positions of rest and they are susceptible of being whisked away when they are stepped by the wheels of the vehicles. <IMAGE>
