Abstract (en)

With a waterproof construction of a keyless-entry portable machine to assure waterproofness, when an upper casing (5) and a lower casing (4) are joined together, an upper plate portion (13a) is pressed by an upper casing (5) to cause a lower end of a side plate portion (13c) to come into pressure contact with a bottom wall (4a) and a through hole (4f) is closed by a plug (14), whereby moisture becomes hard to enter into a cavity (13d) of a keytop in the course of transportation of an intermediate product, or the like. <IMAGE>
