Abstract (en)
Mechanical safety system for fire arms is lockable. Preferred Features: The safety system can be locked using a lockable operating element. The safety system has a locking device which is designed so that it can be operated by a suitable tool and only by the operating element in its secured position. The locking device is a lock and the tool is a key (30). The operating element is a slide or a slide securing device which is locked in its secured position. The operating element is a lever (24) of a lever locking device (20) which is locked in the secured position.
