Abstract (en)
[origin: WO0232248A1] The invention concerns a fixing and/or assembling device comprising two elements (A, B) having respectively teeth (2) and orifices (5) designed to receive the teeth when the two elements are assembled. The teeth (2) are made of elastically flexible material and are deformed in the orifices (5) when the two elements are assembled so as to ensure that the two elements (A, B) are maintained together, said teeth recovering their shape when the two elements (A, B) are separated.
