Abstract (en)

[origin: WO0232390A1] The invention concerns an alcohol-free translucent perfuming composition in the form of a vaporisable oil-in-water emulsion containing at least a perfuming ingredient, a surfactant system having a hydrophilic-lipophilic ratio not less than 10 and water. The composition has been optimised so as to include significant amounts of perfume. The emulsion is also characterised by the variation of the average size of its drops during the month following its formulation, at a temperature of 45 DEG C and ranging between 0.1 and 30 nm.
