Abstract (en)

[origin: WO0234576A1] The invention relates to a node point, comprising a first piece (1), to which at least one line of the CAN bus leads and a second piece (2), which may be connected to the first piece (1) and comprises means for connecting the line. Said node point may be easily disconnected such that an error analysis is possible. Furthermore, the node point, in other words the line connection may be easily and reliably reformed, by connecting the first and second pieces (1, 2).
