Abstract (en)
[origin: WO0231229A1] The invention relates to a processing installation for an engraved cylinder, comprising a base frame (10) on which various processing stations (11 to 14) are fixed. Furthermore, a rail system (15) is installed on the base frame, on which a converter (16) can be moved. As the assembly can be carried out beforehand by the manufacturer of the processing installation, the operator is spared costly installation work. In another form of embodiment, the processing system is composed of a plurality of modular units (23). Each modular unit (23) consists of a base frame (21), at least one processing station (20) mounted on the base frame (21), and a runner surface segment (22) for the converter (16).
