Abstract (en)

[origin: WO0233203A1] A device for initiating an opening and closing process in a motor vehicle is disclosed, comprising a first proximity sensor (11, 14), which generates an unlocking command signal (20), for initiating an opening process in a locking system (46, 48) on a motor vehicle (40), as a user approaches the first proximity sensor (11, 14). A second proximity sensor (12, 16) is provided, which generates a locking command signal (23), for initiating a locking process in the locking system (46, 48) of the motor vehicle (40), as a user approaches the second proximity sensor (12, 16).
