Abstract (en)

[origin: WO0235098A1] The invention relates to a pump (10), comprising a pump head (12) which has a pump chamber (11), and an electromotor (14) which drives the pump head (12) and which has a rotor (38). Said rotor (38) is connected to the pump head (12) and is situated in a rotor chamber (82) which open to the pump chamber (11). According to the invention, the stator (40) that is positioned radially around the rotor chamber (82) is sealed against the pumping medium by a sealing wall (51) belonging to the stator (40) and at least one housing wall (64).
