Abstract (en)

[origin: US2004029061A1] The invention provides a containerised candle having a candle wick sustainer (2) having an upper section (5) for holding the wick (4) supported by supporting side walls (8a, 8b) which may be provided with stabilising flanges (9a, 9b). This enables the wick to burn down whilst leaving an insulating layer of wax in the base of the container.
