Abstract (en)
[origin: WO0233603A2] Software applications (A1 - A6), especially MES (Manufacturing Execution Systems) applications often exist in a heterogeneous form. The inventive system and method enable a user at a work station (AV1 - AV3, PIW1, PIW2) to manage and monitor a number of different applications. Applications from the ERP (Enterprise Resource Planning) level and from the automation level can also be integrated. In addition, a user can define and monitor workflows (operations for carrying out, e.g. production orders).
