Abstract (en)

[origin: EP1329340A1] Decorative article (1) consists of a supple supporting layer (11) with a flock outer surface (12) and an inner surface (14) coated with an adhesive (15). . The adhesive-coated inner surface is covered with a protective film layer (2) prior to application. Decorative article (1), designed to be applied to the skin, especially of the face e.g. in the form of a beauty spot or motif for decorative purposes, consists of a supple supporting layer (11) with a flock outer surface (12) and an inner surface (14) coated with an adhesive (15). The supporting layer is made from a material that is permeable to the adhesive used for the flock outer layer, being a non-woven material with a preferably density of 60 - 90 g/sq m. The adhesive-coated inner surface is covered with a protective film layer (2) prior to application. An Independent claim is included for a procedure to fabricate the article by fixing the outer an inner face to the support layer with an adhesive. The inner surface is coated with adhesive, and covered with a protective film layer.
