Abstract (en)

[origin: EP1329396A2] Conveying system for magazines of vehicles, especially cable-pulled vehicles, comprises a track along which the vehicles are moved in a specified direction, and a conveying device extending at least partly parallel to the track with driver devices (6, 8) engaging with the vehicles to adjust the vehicles along the track. The driver devices are flexible elements which interact at specified sections along the track with cams (1, 2) fixed to the track which bring the elements from an engagement position on the vehicle into a release position in which the conveying device is uncoupled from the vehicle. Preferred Features: The conveying device is a revolving chain (16).
