Abstract (en)

[origin: EP1329410A1] In an elevator car position checking apparatus, a wire apparatus having a loop-shaped wire which is cycled together with raising and lowering of an elevator car is disposed inside a hoistway along the raising and lowering direction of the elevator car. An inspection window for viewing the wire is disposed on a landing so as to face the wire. Markings are applied to the wire to indicate when the elevator car has moved to a position close to a landing. <IMAGE>
