Abstract (en)
[origin: EP1329680A1] Plate heat exchanger comprises a heating/cooling agent (10, 20) in a heat exchanger block (9) containing a number of heat exchanger passages for the heating/cooling agent, a first fluid stream (40) and a second fluid stream (30). The heat exchanger block has a first partial region in which all heat exchanger passages for the first fluid stream are arranged, and a second partial region in which all heat exchanger passages for the second fluid stream are arranged. The first and the second partial regions do not overlap. The first and the second partial regions extend over the height of the heat exchanger block. An Independent claim is also included for a process for indirect heat exchange of several fluid streams.
