Abstract (en)

[origin: WO0236459A1] The invention relates to material handling apparatus (1) for gravity discharge of flowable particulate material through an outlet of a container (not shown) which outlet is normally obturated by a valve which is raisable into the container for material flow through the outlet, the apparatus (1) comprising a probe (2) for contacting the valve, operatively connected to an actuator (3), and adjustment means (5) to vary the extent of operation of the actuator, the adjustment means being operable via drive means (4) disposed at substantially 90 DEG to the direction of operation.
