Abstract (en)
[origin: WO0236474A1] The invention relates to a device for processing flat objects, especially printed products. The device has a track system (10) in which individual conveying elements (16) are located one behind the other, in such a way that they can move freely. Each of the support elements (18) is positioned on a single conveying element (16) in the form of an extension arm. The device has stations (44) which can be configured as a supply station, processing station or output station. Each station (44) has its own drive device (22) for moving the conveying elements and support elements (16, 18) through the station (44) at the distance required and at the speed required by said designated station (44).
