Abstract (en)

[origin: WO0237021A1] The aim of the invention is to produce an easily readable display device (5) for a transmitter element (1). To this end, one corner on the housing (3) of a transmitter element (1) is configured in the form of a display device (5). Parts of the direct light in a first beam direction (23) of an LED are deviated in different directions by means of two integrated reflectors (11) which are located beneath the outer wall (9) of the body (7) that is shaped in the form of a housing corner.
