Abstract (en)

[origin: FR2815445A1] The card reader emulation determines the exchange types (APDU) that will require emulation and emulates return of a state word (SW1,SW2) under the PCSC standard. When the data exchange corresponds to Case 2 under ISO 7816-4 the command for this state is received, and when it corresponds to case 4, a GET-RESPONSE command is received. The response (R-ADPU) is returned in response to the command.
