Abstract (en)

[origin: WO0237444A1] The invention relates to a method for acquiring data in a road network which is covered by a number of base stations of a GSM or UMTS standard cellular mobile radiotelephony network and in which a number of vehicles move. These vehicles are each provided with an operational mobile terminal for the mobile radiotelephone network. Operating data which are produced when the terminal operates in contact with the base station are used to determine the current whereabouts of the respective terminal. The invention also relates to a terminal for a cellular mobile radiotelephone network, especially a GSM or UMTS standard mobile radiotelephone network, in a vehicle.
