Abstract (en)

[origin: WO0225924A2] According to the invention, a data transmission together with a television signal, comprising an image signal and an extraction signal, to a television receiver device may be achieved in a simple and economical manner in a method for transmission of data together with a television signal, whereby the data is transmitted in a region, which lies between the last line or column to be filled by check or data signals and a pre-determined line or column of the image signal.
