Abstract (en)

[origin: EP1331185A2] The device has a guide edge bounding the transport path and at least one alignment element (92,100) for simultaneously transporting a bill in the transport direction and in the guide edge direction. The transport path is curved about an axis parallel to itself and perpendicular to the guide edge and is a closed path with a bill inlet (64) and a controlable bill outlet (66).
