Abstract (en)

[origin: EP1331332A1] The lock comprises head section (3A) and a rear bar (2A) with one end (4) projecting beyond the end of the head section to form a locking member to engage with a catch plate, while its other end has a bend (15A) that passes through an aperture in the head section to form a support and guide (8A). The head section and rear bar have a secondary support and guide formed by a bend with a slot (13) in the end (12) of the bar, with the tip (9a) of the head section passing through the slot so it can move axially relative to the bar.
