Abstract (en)

[origin: WO0238843A2] The invention relates to a texturing machine for crimping threads. Said machine comprises a plurality of process units and delivery rolls, at least one delivery roll being formed by a driven conveyor roller and a rotatable overflow roller. The two rollers are arranged on a machine frame in a projecting manner, in order to guide a thread having a plurality of loops. According to the invention, a spreading device is associated with the rollers, for a first spreading of a thread before the beginning of the process. The running thread having a total loop of > 360 DEG can thus be spread on the circumference of the rollers.
