Abstract (en)

[origin: WO0237428A1] The invention relates to a device for the control of functions by means of biometric data, in particular for access control, comprising at least one camera (2), for recording biometric data, at least one memory (5), for the storage of the biometric data of authorised persons and a computing and control unit (3), with at least one interface (6), for the connection to a unit (7) to be controlled, for example, a door lock, whereby said camera (2) is arranged in a detachable housing module (1), connected to the computing and control unit (3). According to the invention, a manageable, flexible and economical device which is difficult to manipulate can be achieved, whereby coding or encrypting devices (26) and corresponding decoding and decrypting devices (27) are arranged in the housing module (1), in the computing and control unit (3) and in the unit (7) to be controlled. Furthermore, identification or authentication units (22) can be provided in the housing module (1), or in the computing and control unit (3).
