Abstract (en)
[origin: EP1332690A2] The present invention provide a clasp comprising a piston member, cylinder member, and a member for attaching and detaching said piston member to said cylinder member. The clasp of the present invention comprises an elastic member which apply a resilient force to said piston member in the direction that said piston member is separated from said cylinder member; a lock pin projected on either surface of said piston member and said cylinder member contact with each other in substantially vertical direction to the remaining surface so that projection elastic force is applied in a movable manner: a W-shaped or M-shaped guide groove including a concave portion for inserting said lock pin and having a route for directing the movement of the lock pin, which comprises a first bent portion, a second bent portion, and a third bent portion from the inlet and outlet of said route; and a member for directing the movement of said lock pin. <IMAGE>
