Abstract (en)
It comprises a symmetrical housing, a head, and a wheel carrying a tape spool and clutch means as well as means to permit rotation of the wheel in a single direction comprising inclined legs at an angle ranging from 2 DEG to 30 DEG provided at the wheel which ends rest on a shaft formed in the housing permitting rotation of the wheel in a single direction by locking. The clutch means allow sliding between the movement of the wheel and the spool and they comprise outwardly projecting flanges provided at the wheel the ends of which contact a ring fitted between the spool and the wheel further permitting to hold the tape spool. The head includes stops for preventing the tip from being excessively deformed and inclined walls guiding the tape towards the head. <IMAGE>
