Abstract (en)

[origin: WO0240230A1] The invention relates to a cutting device comprising two jaws (1,2) which can be moved one over the other by means of manual operation, at least one of said jaws embodying a cutter (3), in addition to one protective nose (4) which is arranged in front of the cutter (3) and which projects into the cutting mouth extending between the jaws (1,2). According to the invention, the protective nose (4) can evade a restoring force (7) and one of the jaws (1) embodies an avoidance chamber (5), the bottom (6) of which supports the end of a spring (7), said spring engaging with the protective nose (4) by means of its end.
