Abstract (en)

[origin: US6688665B2] The invention concerns a seat, in particular for a motor vehicle, comprising a seat back, a cushion, a pivoting handle mounted on one of the lateral sides of the seat back and adapted to cause the seat back to tilt onto the cushion from a raised position, a rotary plate fixed under the cushion, and a pivoting lever affixed to the rotary plate and adapted to cause the cushion to rotate on itself with the seat back in the raised position. According to the invention, the seat comprises means for pivoting the pivoting lever immediately after the handle has pivoted so as to cause the cushion to rotate about the rotation axis of the rotary plate immediately after the back has been tilted on the cushion.
