Abstract (en)

[origin: WO0239022A1] Arrangement in an oven, preferably for domestic use, comprising an oven cavity (10) and a supporting means (22) provided in the oven and adapted to support a load in the form of one or a plurality of baking plates, gridirons or the like disposed one above the other, wherein the supporting means (22) is swingably mounted to allow for the load to be moved between a first end position in the oven cavity (10) and a second end position outside thereof where the load is elevated with respect to its position in the oven cavity (10). The arrangement includes a locking device (52, 54) adapted to lock the supporting means (22) in the respective end position, the locking device (52, 54) being of a design such that movement of the supporting means (22) beyond the respective end position cancels the locking action of the locking device (52, 54) and permits movement to the opposite end position.
