Abstract (en)
[origin: WO0235641A1] A method of making a metal-air battery (50) having an air access opening and an air plenum (250). The method includes determining a thickness of the air plenum (250) derived according to Fick's Law, and forming the battery having the air plenum with the determined thickness. The right thickness of the air plenum is necessary for a good airflow to a cathode of the battery.
