Abstract (en)

[origin: CA2418542A1] The configuration of skis, especially size and form of the shovel is different in dependence on the ground to be used on: For skiing on normal prepared pistes it is not necessary, but even a hindrance, if the skis have an excessively long and big shovel. For changing the dimension of the shovel of a normal ski in case of loose deep snow skiing an attachment portion for the front end of a ski is suggested, that can be fixed to the shovel and especially is curved in the side view of the ski.
