Abstract (en)
[origin: EP1334909A1] Tower of reduced weight and without internal reinforcements, in tubular construction completely hollow and in different geometries, of polygonal horizontal cross- section with sides straight or curved or a combination of both, with vertical edges (1) for reinforcement of this bearing structure, these edges (1) being prominent and in appropriate upper continuation of the back end of the base (2) of the machine, determining some cylindrical figures, as well as having between two of these broadly cylindrical edges (1) the rail (3) of the reduction gear motor (4).
