Abstract (en)

The piece-pulling device (11) comprises a pair of diverter rollers (31, 31) with axes parallel to and side by side with each other, associated with a cutting device (67) which cuts the tubular fabric (59A) produced by the circular machine along a longitudinal cutting line. Downstream of the cutting device are an underlying pair of divaricating rods (33, 35) which open the fabric and lay it flat and underneath said rods (33, 35), a series of traction and guide rollers (43 - 57), at least one of which is motorized, to pull the fabric and wind it on a piece-winding roller (70A). The diverter rollers (31, 31) are motorized and exert a tractive force on the fabric. <IMAGE>
