Abstract (en)
[origin: EP1335069A2] Artificial stone (1) has composite sections (3, 4) which extends in its lower region in the direction parallel to the side surfaces in a plinth-like manner. Automatic positioning of the composite sections of neighboring stones between the composite sections occurs when neighboring stones are placed together maintaining a required minimum distance. Preferred Features: The stone has a number of composite sections arranged at a distance from each other along one side surface (2). The composite sections (4) have a partial cylindrical shape and the composite sections (3) taper upward.
