Abstract (en)

[origin: EP1335080A1] A heat and sound insulating material, e.g. for flat roofs, comprises mineral fibres bound with a binding agent. The material is in the form of plates, with large surfaces and side surfaces. Edges are formed between the large surfaces and the sides, and the edges are chamfered (6). A heat and sound insulating material, e.g. for flat roofs, comprises mineral fibres bound with a binding agent. The material is in the form of plates, with large surfaces and side surfaces. Edges are formed between the large surfaces and the sides, and the edges are chamfered (6). A strip is applied at the overlap points, using adhesive, e.g. a thermoplastic adhesive. A separation layer is applied to the surface, which consists of a membrane and a polyamide fibre layer.
