Abstract (en)
[origin: EP1335095A2] The edging has an angle rail whose horizontal upper arm (2) forms a protective edge and whose vertical arm has a U-shaped clamping holder section with stop webs (10) moulded centrally in indentations open at the front in the base web (9). The stop webs are shaped and the material of the edging strip is selected so that with the high pressure of the thermally extending window sill the edge of the sill is cut in without swivelling the webs and the webs are deformed as the material is forced into the indentations.
