Abstract (en)

[origin: WO0241822A1] The invention relates to a system for supporting accessories on a patient resting surface of an operation or examination table (10), comprising an accessory adapter (24) that can be slipped on the profile of the patient resting surface (14). Support elements (32) for accessories are fastened to said accessory adapter. The adapter (14) comprises two claws (26) adapted to encompass the longitudinal edges of the patient resting surface. Said claws are interlinked via a bracket (28) that extends across the width of the patient resting surface.
