Abstract (en)  
[origin: WO0240172A1] The aim of the invention is to eliminate vibrations and resonances, occurring in the constructional system in a device with a motor-driven system for the separation of non-magnetisable metals, in particular non-ferrous metals and the ferrous fractions in a solids mixture, by means of a drum (2) mounted on and rotating about a stator (1), within which a magnetic rotor (4) fitted with permanent magnets (3) is eccentrically arranged and mounted on said stator (1). Said aim is achieved whereby the stator (1) is provided with a balance weight (1.1) for mass balance.
