Abstract (en)
[origin: WO0242039A1] The invention relates to an intermediate product, a method for processing an intermediate product and a wood-chipping device for processing an intermediate product. The intermediate product (20) is substantially rod-shaped and is between one and two times as long as oriented strand (OS) chips. The intermediate product is fed to a wood-chipping device comprising a large number of blades (4), whose cutting edges run at least approximately parallel to the blade ring axis (2) and which enclose a working chamber. The intermediate product is rotated about the blade ring axis and is aligned in such a way that it lies substantially parallel to said ring axis and is pressed by centrifugal force against the cutting edges of the blades.
