Abstract (en)
[origin: WO0242172A1] The invention relates to a metal sealing cap (1) for sealing a bottle or any another container, comprising a top (2) which preferably has a seal on the inside, a tubular shaft (12) which extends seamlessly from the top, a roll-on area (4) which is located in the area of the shaft (12), for rolling-on a thread, a deforming area (10), which adjoins the roll-on area (4) and wherein a security element (11) guaranteeing that the bottle or container has not been opened is located; and which undergoes a visible deformation when the bottle or the container is opened for the first time. The invention provides for a clearly visible, irreversibly deformable security element in the deformation area (10) in the form of at least one material weakness (11), which has a closed, upwardly oriented contour starting from a bottom, unweakened base line (115).
