Abstract (en)
[origin: WO0242712A1] The aim of the invention is to construct an industrial installation (1), for example an industrial power plant, comprising a large number of functional units with dimensions that have been proportioned in accordance with a predeterminable design parameter, using a minimum of design and planning resources. To achieve this, an inventive modular system comprises a number of modular components (2, 10, 20, 30, 40, 50, 60), each of which contains a number of functional units, which are grouped according to their function, each modular component (2, 10, 20, 30, 40, 50, 60) having standard dimensions that are independent of the design parameter.
